NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

#### MAPPING INFORMATION: The sequence of this

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Bric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center: For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CH7, send mailto:egreen@nhgri.nih.gov/DIR/GTB/CH7, send

# SOURCE INFORMATION:

This clone was derived from human PAC library RPCI-4, prepared by Pieter de Jong and coworkers at Roswell Park Cancer Institute, using the method described by Joannou et al., Nature Genetics 6:84-9 (1994). The library is from one male donor. For further details, see http://bacpac.med.buffalo.edu/
The clone is available from Genome Systems, Inc.
(http://www.genomesystems.com).
VECTOR: PCYPAC2
NEIGHBORING SEQUENCE INFORMATION:
The actual start of this clone is at base position 1 of RP4-531G15 actual end is at base position 97979 of RP4-531G15.

FEATURES SOURCE		TITLE JOURNAL REFERENCE AUTHORS TITLE JOURNAL REFERENCE AUTHORS TITLE JOURNAL COMMENT
The clone sequenced to the left is CTD-2105K18, 2000 bp overlap; the clone sequenced to the right is RP11-533K11, 2000 bp overlap. Actual start of this clone is at base position 141753 of CTD-2105K18; actual end is at base position 16829 of RP11-533K11.  Polymorphisms have been identified between AC016444 and AC074390. Data from AC016444 was used to finish this clone, AC074390. 1. 11172 2 /organism="Homo Sapiens" /db_xref="taxon:9606" /chromosome="7" /clone="RP11-515K14"	NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.  This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.  MAPPING INFORMATION:  The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center: For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov/DIR/	Direct Submission Submitted (30-JUL-2000) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. Louis, MO 63108, USA 4 (bases 1 to 111722) Waterston,R.H. It currently consists of is contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequencing vector: M13: M77815: 100% of reads Chemistry: Dye-terminator Big Dye: 100% of reads Assembly program: Phrap: version 0.960731 Consensus quality: 190829 bases at least Q40 Consensus quality: 1908597 bases at least Q30 Consensus quality: 202013 bases at least Q20

                                                                                                                                                                                                                   source
                                                                                                                                                                                                                                                                                                                                                                                                                                            rogether with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated repeat sequence elements. Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL; Sw: SWISSPROT: Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping Group. Further information can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 9 mapping Group.
